# Blue Fish DIXI

## Documentum Import eXport Interface

Whether you are initially populating a document repository, migrating content from an existing system, or consolidating repositories, your choice of migration software is critical. Blue Fish DIXI™ provides the most flexible and scalable way to move content into a Documentum-based content management system.

DIXI is a powerful application that provides an XML-based interface to virtually all of Documentum's capabilities. Our open architecture makes it possible to access content from any data source and to enrich the data along the way. Regardless of your import and export needs, DIXI has the power and flexibility to do the job.

## Common Applications of DIXI

- Move content between Documentum and third party repositories or file systems.
- Upgrade Documentum repositories.
- Update or modify Documentum objects without writing DFC code.
- Create real-time integrations between Documentum and other business systems.

## Power and Flexibility Means Confidence

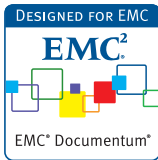

More than any other product available today, DIXI is robust enough to move and modify your information no matter how many documents and business rules you have. DIXI is incredibly flexible; it gives you the freedom to manage all of your document migration challenges — from the mundane to the complex. With DIXI, you'll be prepared for the unexpected.

**“DIXI is a very powerful tool — we have leveraged it to solve many different types of migration challenges.”**

– Dr. Markus Berger  
Hoffman–La Roche

**“Migrations turned from a feared nightmare into a no-brainer.”**

– Frans Pleij  
Solvay Pharmaceuticals

**Blue Fish DIXI™ is certified for use with EMC Documentum.**

## **Import-Related Capabilities**

- Create any Documentum object — document, folder, user, etc.
- Version or overwrite existing documents.
- Link content into multiple locations.
- Automatically create folders when they do not exist.
- Set ACLs and grant or revoke permissions.
- Re-import modified documents based on timestamps.
- Import renditions, annotations, virtual documents and other relationships.

## **Export-Related Capabilities**

- Export attributes and/or content.
- Automatically generate an import file so that exported content can be re-imported into a different repository.
- Export renditions, annotations, virtual documents and other relationships.
- Select specific document versions to export or export the entire version tree.

## **General Features**

- Configurable reporting levels.
- Direct execution of API or DQL calls.
- Wrap imports in transactions that can be rolled back.
- Robust error handling.
- Try out commands and actions with Test Mode.
- Platform independent.
- Supports EDMS 98 through Documentum 5.
